July 31, 2024

Forester's Report 7 31 2024

July was wet.

As of July 5 only Hornbeam Lake had water flowing through high-water outlet.

As of August 7, Hornbeam Lake outlet is flowing and is at normal high-water level. Sunfish Lake outlet is flowing and is at normal high-water level. Horseshoe Lake is nearly up to the high-water outlet level.

No burning permits were issued during July.

Will be coordinating with a contractor for street edge pruning in the near future. Have identified several street edge areas for pruning similar to what was completed in 2023.
