

*In the next few weeks the West St Paul Police Department will be conducting an **aerial observation** to count and determine where the City's **deer populations** may be. You may hear and see a low flying helicopter, mainly in the south-west portion of the City. The deer count information will be used to help determine the need for a deer management plan. The communities of Sunfish Lake and Mendota Heights have been conducting a deer management plan for the past several years. Recent concerns by residents and deer-car crashes have caused the police department to look into this issue.*

For More Information or to provide concerns regarding the deer population please
